Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 October 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Lorber (3,357,395).

The Lorber reference discloses a fluid dispenser comprising a bellows 1, a neck 2 closed by a cap 3 on which is mounted an absorbent pad 7 formed with a dome shaped outer surface, the cap including an aperture 6 through which fluid can flow to the pad 7 when the bellows 1 is depressed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1- 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gebhard (5,186,563).

The Gebhard reference discloses a fluid dispenser comprising a bellows 42, an upstanding open-ended neck portion 45 with external threads, the bellows having a plurality of vertically spaced ring-shaped outer fold-lines, a plurality of vertically spaced

Art Unit: 3751

inner ring-shaped fold-lines of smaller diameter than that of the outer fold-lines and each positioned at a height generally midway between each pair of outer fold-lines; and annular webs extending between neighboring inner and outer fold-lines.

Although Gebhard does not disclose the dispenser extruded from a low density polyethylene material, the mean thickness of the webs between 0.4 to 1.5 mm, the height of the dispenser between 55 and 85 mm, the weight of the dispenser between 10 and 17.5 grams, the mean thickness of the outer fold-lines and the inner fold-lines; and the ratio of the thicknesses of the inner and outer fold-lines, it would have been obvious to one of ordinary skill in the art at the time the invention was made to select a mean thickness, height, weight, and ratio of thicknesses within a certain range to best fit a particular dispenser design and to optimize the performance. See *In re Aller*, 105 USPQ 233, using the optimum or workable ranges involves only routine skill in the art. Regarding the material made of the dispenser, selecting a known material on the basis of its suitability for the intended use would be a mere matter of obvious design choice.

Regarding claim 6, the upper open end of the neck 45 is closed by a cap 12 with internal threads.

Regarding claim 7, the tube 20 is provided within the cap 12.

Allowable Subject Matter

5. Claim 8 is allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bouet teaches a dispenser having a bellows.
